please do not report the images to the
Image Problem Mailbox.**

SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: SHENGJUN WANG Examiner #: 77601 Date: 10-31-01
 Art Unit: 1617 Phone Number 301-856-64 Serial Number: 09/721291
 Mail Box and Bldg/Room Location: CA112B19 Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

 Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: Fat finding polymers

Inventors (please provide full names): Josefink et al

Earliest Priority Filing Date: 07/14/1999

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Please search the polymers

defined in claims 1, 19, 71, 73, 75, 76
 and the polymer employed in claim 22.

⑦ employment of the above polymers for treating

⑥ obesity, ⑧ hypertriglyceridemia ⑨ steatorrhea
 and ⑩ for reducing the absorption of dietary fat

See attached claims

L12 ANSWER 1 OF 7 CAPLUS COPYRIGHT 2001 ACS

2001:468203 Document No. 135:66201 Conjugates targeted to the interleukin-2 receptor. Prakash, Ramesh K.; Clemens, Christopher M. (Watson Laboratories, Inc., USA). U.S. US 6251866 B1 20010626, 22 pp., Cont.-in-part of U.S. Ser. No. 914,042, abandoned. (English). CODEN: USXXAM. APPLICATION: US 1998-128572 19980804. PRIORITY: US 1997-914042 19970805.

AB A compn. for intracellular delivery of a chem. agent into an interleukin-2-receptor-bearing cell, e.g. an activated T cell, includes a chem. agent and at least one copy of an interleukin-2-receptor-binding and endocytosis-inducing ligand coupled to a water sol. polymer. The ligand binds to a receptor on the interleukin-2-receptor-bearing cell and elicits endocytosis of the compn. The compn. also preferably includes a spacer for coupling the chem. agent and the ligand to the polymer. Chem. agents can include cytotoxins, transforming nucleic acids, gene regulators, labels, antigens, drugs, and the like. A preferred water sol. polymer is a polyalkylene oxide, such as polyethylene glycol and polyethylene oxide, and activated derivs. thereof. The compn. can further comprise a carrier such as another water sol. polymer, liposome, or particulate. Methods of using these compns. for delivering a chem. agent in vivo or in vitro are also disclosed. A method of detecting a disease, such as T-cell lymphocytic leukemia, T-cell acute lymphoblastic leukemia, peripheral T-cell lymphoma, Hodgkin's disease, or non-Hodgkin's lymphoma, assocd. with elevated levels of sol. IL-2 receptor is also disclosed.

(English). CODEN: PIXXD2. APPLICATION: WO 2000-US1753 20000126. PRIORITY: US 1999-237405 19990126.

AB A sustained-release pharmaceutical compn. includes a polyester contg. a free COOH group ionically conjugated with a bioactive peptide comprising at least 1 effective ionogenic amine, wherein at least 50% by wt . of the peptide present in the compn. is ionically conjugated to the polyester. Thus, a rod delivery system was obtained by synthesizing the citric acid ester of .epsilon.-caprolactone-glycolide copolymer followed by treatment with the peptide, LHRH acetate. The ionic conjugate and the polymer were melted and the melted materials was extruded into rods.

L12 ANSWER 3 OF 7 CAPLUS COPYRIGHT 2001 ACS
1997:127114 Document No. 126:118183 Polymerization of Unprotected Synthetic
Peptides: A View toward Synthetic Peptide Vaccines. O'Brien-Simpson, Neil
M.; Ede, Nicholas J.; Brown, Lorena E.; Swan, John; Jackson, David C.
(Cooperative Research Centre for Vaccine Technology, University of
Melbourne, Parkville, 3052, Australia). J. Am. Chem. Soc., 119(6),
1183-1188 (English) 1997. CODEN: JACSAT. ISSN: 0002-7863. Publisher:
American Chemical Society.
AB A generic method is reported for the assembly of multi-peptide polymers in

Searched by: Mary Hale 308-4258 CM-1 12D16

which peptides are synthesized in the solid phase, the N-terminal residue acryloylated, and the derivatized peptides cleaved, purified and finally polymd. by free radical induced polymn. The high mol. wt. polymers generated in this way have individual peptides pendant from a backbone support. Incorporation of 6-aminohexanoyl or other residue(s) at the N-terminus of the peptide prior to acryloylation allows the peptide to be distanced from the polymer backbone and incorporation of acryloylated reagents into the polymn. mixt. also permits distancing of pendant peptides along the length of the backbone support. The polymn. process results in highly antigenic artificial proteins as measured by ELISA. Because this approach allows the incorporation of the same or combinations of different purified peptides into polymers, it lends itself to the assembly of potential vaccine candidates contg. epitopes from single or multiple pathogens into a single covalent structure.

L12 ANSWER 4 OF 7 CAPLUS COPYRIGHT 2001 ACS

1997:19991 Document No. 126:135536 Biological activity of luteinizing hormone releasing hormone after oral dosing with a novel nanoparticulate delivery system: copolymerized peptide particles. Hillery, Anya M.; Toth, Istvan; Florence, Alexander T. (Centre for Drug Delivery Research, School of Pharmacy, University of London, London, WCIN IAX, UK). Pharm. Sci., 2(6), 281-283 (English) 1996. CODEN: PHSCFB. ISSN: 1356-6881. Publisher: Royal Pharmaceutical Society of Great Britain.

AB The ability of a novel copolymeric nanoparticulate delivery system, co-polymerized peptide particles (CPP), to deliver a biol. active peptide via the oral route was investigated using the decapeptide LH releasing hormone (LHRH) as a model drug. Intact male Wistar rats (270 g, 9 wk old) were orally dosed via gavage for 14 days with either the CPP delivery system (contg. 1 mg LHRH/day), free LHRH in a buffer vehicle (1 mg LHRH/day) or saline. The seminal vesicle and prostate wts. of rats dosed with the CPP system were approx. 50% of the wt. of the same organs from rats dosed with saline or free LHRH. Repeated daily oral dosing with the CPP system also resulted in a statistically significant fall in serum testosterone concns., to approx. 55% of the control level. The results demonstrate that biol. active LHRH was absorbed after oral dosing with the CPP system, whereas the free peptide had no detectable biol. activity. The chem. conjugation of LHRH within this copolymeric nanoparticulate delivery system represents a viable approach to promoting oral absorption.

1992:537523 Document No. 117:137523 Dose decrease of D-Phe6-GnRH for regulation of ovulation by formation of complexes with polyglycine. Naumann, W.; Braun, Karin; Losse, G. (Inst. Lebensmittelchem. Tech. Biochem., Tech. Univ. Dresden, Dresden, O-8027, Germany). Pharmazie, 46(11), 795-7 (German) 1991. CODEN: PHARAT. ISSN: 0031-7144.

AB The gonadotropin-releasing hormone (GnRH) analog D-Phe6-GnRH was complexed with polyglycine (mol. wt. 3000) by stirring together the 2 substances dissolved in HCO₂H, followed by evapn. of the acid and drying the complex over KOH. The complex was more resistant than the free hormone to tryptic hydrolysis in vitro. In the ovulation test in mice in vivo, the complex acted as a slow-release prepn.; its ED₅₀ was 34-fold less than that of the unprotected hormone.

(Department of Physical Chemistry and Technology of Polymers, Silesian Technical University, Gliwice, 44-100, Pol.). Polymer, 41(9), 3129-3135 (English) 2000. CODEN: POLMAG. ISSN: 0032-3861. Publisher: Elsevier Science Ltd..

AB The decarbamates obtained from monomethacrylates of oligoethylene glycols and aliph. diisocyanates were polymd. free radically to form crosslinked polymers consisting of primary chains, crosslinks and pendant side chains bearing unreacted methacrylate groups. The polymers were examd. by dynamic mech. thermal anal. (DMTA) to yield values of glass transition temp. and storage modulus. The latter enabled the network parameters for individual polymers to be evaluated. These have been found to be low when compared with mol. wts. of the monomers and can be attributed to intermol. interactions between the pendant chains and the crosslinks involving urethane linkages. This finding is supported by the 1H NMR expts. on monomers in soln.

ISSN: 0935-9648. Publisher: Wiley-VCH Verlag GmbH.

AB An approach to the immobilization of compds. on surfaces is described that should also be applicable to combinatorial libraries. The attachment of an electrochem. polymerizable phenol group to mols., in this case biotin, followed by anodic polymn. yielded thin insulating layers. When the polymn. takes place in several mini-cells simultaneously, the parallel immobilization of streptavidin can be achieved. The characterization of layers of 3 anodically polymd. biotinylated phenols is described in detail.

J.; Aerts, L. (Univ. of Twente, Enschede, 7500 AE, Neth.). Polymer, 39(11), 2291-2297 (English) 1998. CODEN: POLMAG. ISSN: 0032-3861. Publisher: Elsevier Science Ltd..

AB Polyether-polyester-polyamides were prepd. in the melt from di-Me N,N'-(1,4-butylene)bis(terephthalamate) (4NT) and ethylene or propylene glycols. The melting temps. of the polymers decreased with increasing chain length of the glycols. The undercooling for these polymers, detd. at 20.degree./min, was low (20-35.degree.), suggesting a very high rate of crystn. Injection molded samples were analyzed with dynamic mech. thermal anal. The Tg decreased with increasing glycol length to 42.degree. for tetraethylene glycol. The Tg/Tm ratio was high (0.69-0.70). The dimensional stability of the polymers above the Tg was high.

AB The compn. comprises (A) 100 parts radical-curable compd. prepd. by reacting a polyether having .gtoreq.2 epoxy groups/mol with a polymerizable unsatd. group- and carboxylic group-contg. compd.; and (B) 0.01-15 parts photopolymer. initiators. Thus, 100 parts reaction product of polypropylene glycol diglycidyl ether and acrylic acid was mixed with 3 parts 2-hydroxy-2-methyl-1-phenyl-propane-1-one, coated on a glass plate, and UV-cured to give a film showing Young's modulus 0.08 kg/mm², tensile strength 0.10 kg/mm² and elongation 150%.

AB Highly branched polyols with d.p. 1-300 and polydispersity <1.7, in which 10-33% of the monomer units are branch points, are obtained by (co)polymerization of glycidol in the presence of an active-H initiator with basic catalysis. Glycidol is added as a dil. soln., and the solvent used for the diln. is continuously removed by distn. The resulting polyols are colorless and contain the initiator only as a core unit. Thus, 1.2 g trimethylolpropane was mixed with 0.7 mL 25% KOMe in MeOH at 100.degree., the MeOH was distilled, and the product was taken up in 15 mL diglyme. A soln. of 34 g glycidol in 100 mL THF was added to the diglyme soln. at 140.degree. at the rate of 5 mL/h with continuous distn. of THF to give a viscous liq. product, after neutralization with Amberlite IR 120, having mol. wt. 3700 and polydispersity 1.15, in which 26% of the monomer units were branched.

REFERENCE 1: 119:118041 Hydrophilic and amphipatic acrylic monomers, and their preparation. Kozulic, Branko; Heimgartner, Urs (Switz.). U.S. US 5185466 A 19930209, 19 pp. Cont.-in-part of U.S. Ser. No. 293,840, abandoned. (English). CODEN: USXXAM. APPLICATION: US 1991-688752 19910422. PRIORITY: US 1989-293840 19890105; GB 1990-8873 19900420.

AB The monomers (M) are amides derived from (meth)acrylic acid and amino sugars; polymers derived from M alone or with other comonomers via common radical polymn. were prepd. and are useful, esp. in the form of crosslinked gels, in sepns. by electrophoresis and chromatog. Thus, reaction of 2-amino-2-deoxy-D-glucitol with acryloyl chloride gave N-acryloyl-2-amino-2-deoxy-D-glucitol, which could be polymd. using persulfate to a water-insol. polymer gel (the electrophoresis run using this gel was also demonstrated).

REFERENCE 2: 116:195102 Hydrophilic and amphipathic acrylic monomers for use in preparing electrophoretic gels. Kozulic, Branko; Heimgartner, Urs (Switz.). Brit. UK Pat. Appl. GB 2246127 A1 19920122, 29 pp. (English). CODEN: BAXXDU. APPLICATION: GB 1990-8873 19900420.

AB Acrylic monomers CH₂:CR₃CONR₂CHR₁(CHOH)_nCH₂OH [R₁ = H, (CHOH)_m; m = 0, 1, 2; R₂ = hydroxyalkyl, polyhydroxyalkyl, C₂-30 hydrocarbon moiety; R₃ = H, Me; n = 1-4] are prepd. and (co)polymd. and optionally cross-linked to gels useful in electrophoretic seps. Thus, N-acryloyl-N-ethyl-1-amino-1-deoxy-D-galactitol (prepd. from N-ethyl-1-amino-1-deoxy-D-galactitol and

acryloyl chloride) was prepd. and polymd. with N,N'-methylenebisacrylamide to a transparent gel, which was run for 3 h in a submerged electrophoretic gel app. at 4 V/cm, stained with bromphenol blue, and used to sep. 3 std. DNA mixts., with resoln. of bands.

AB Title compn. for coatings with good resistance to impact and abrasion comprises anhydride polymer contg. .gtoreq.2 cyclic carboxylic acid anhydride groups, and polymer with anhydride-reactive groups, such as hydroxyalkylamino, hydroxyalkoxyalkylamino, OH-substituted (poly)acryloxyalkylamino, mercaptoalkylamino, and oxazolidino, either polymer contg. .gtoreq.1 flexible chain unit. Thus, condensing 28.6 g Ph glycidyl ether with 100 g bis(3-aminopropyl)polytetramethylene glycol (mol. wt. 2100) gave a .beta.-hydroxyalkylamine functional resin, 135.0 g of which was mixed with 112.0 g itaconic anhydride-Me methacrylate-styrene copolymer in anhydride/OH group mol ratio 1:1, coated on steel plates at 20.degree., and dried for 24 h to a flexible, clear, tack-free film.

REFERENCE 1: 101:232239 Surface-active quaternary ammonium compounds for treatment of textiles and cellulosic materials. Hellsten, Karl M. E.; Emanuelsson, Jan G.; Wahlen, Svante L.; Thebrin, Axel I. (Swed.). U.S. US 4476323 A 19841009, 7 pp. (English). CODEN: USXXAM. APPLICATION: US 1981-237800 19810224.

AB Alkoxyated alcs. are treated with epichlorohydrin (I) and a secondary amine to prep. compds. $RR_1N+R_2R_3 X^-$ (II) (R, $R_1 = R_4OZCH_2CH(OH)CH_2$; $R_4 = C_{12-40}$ hydrocarbyl; Z = polyoxyalkylene derived from oxirane and methyloxirane); $R_2, R_3 = Me, Et, \text{ or hydroxyethyl}$; $X^- = \text{an anion}$). Compds. II are useful for imparting antistatic properties and softness to textiles while preserving hydrophilicity, for imparting wettability to cellulose pulp, and for improving water absorptivity and softness of paper. Thus, 322.4 g 1:1 cetyl alc.-stearyl alc. mixt. was alkoxyated with 299.3 g oxirane and 378.2 g methyloxirane to give 964 g alkoxyate which (724 g) was treated with 86 g I and with 19 g Me_2NH to give an 85% yield of II ($R_4 = C_{16-18}$ alkyl; Z = polyoxyalkylene with av. degree of polymn. 10.5; $R_2, R_3 = Me$; and $X^- = Cl^-$). This II was used as an antistatic agent and softener for fabrics, including polyamide fabrics.

L28 ANSWER 1 OF 14 CAPLUS COPYRIGHT 2001 ACS
2001:468203 Document No. 135:66201 Conjugates targeted to the interleukin-2
receptor. Prakash, Ramesh K.; Clemens, Christopher M. (Watson
Laboratories, Inc., USA). U.S. US 6251866 B1 20010626, 22 pp.,
Cont.-in-part of U.S. Ser. No. 914,042, abandoned. (English). CODEN:
USXXAM. APPLICATION: US 1998-128572 19980804. PRIORITY: US 1997-914042
19970805.

AB A compn. for intracellular delivery of a chem. agent into an
interleukin-2-receptor-bearing cell, e.g. an activated T cell, includes a
chem. agent and at least one copy of an interleukin-2-receptor-binding and

Searched by: Mary Hale 308-4258 CM-1 12D16

endocytosis-inducing ligand coupled to a water sol. polymer. The ligand binds to a receptor on the interleukin-2-receptor-bearing cell and elicits endocytosis of the compn. The compn. also preferably includes a spacer for coupling the chem. agent and the ligand to the polymer. Chem. agents can include cytotoxins, transforming nucleic acids, gene regulators, labels, antigens, drugs, and the like. A preferred water sol. polymer is a polyalkylene oxide, such as polyethylene glycol and polyethylene oxide, and activated derivs. thereof. The compn. can further comprise a carrier such as another water sol. polymer, liposome, or particulate. Methods of using these compns. for delivering a chem. agent in vivo or in vitro are also disclosed. A method of detecting a disease, such as T-cell lymphocytic leukemia, T-cell acute lymphoblastic leukemia, peripheral T-cell lymphoma, Hodgkin's disease, or non-Hodgkin's lymphoma, assocd. with elevated levels of sol. IL-2 receptor is also disclosed.

AB Highly branched polyols with d.p. 1-300 and polydispersity <1.7, in which 10-33% of the monomer units are branch points, are obtained by (co)polymerization of glycidol in the presence of an active-H initiator with basic catalysis. Glycidol is added as a dil. soln., and the solvent used for the diln. is continuously removed by distn. The resulting polyols are colorless and contain the initiator only as a core unit. Thus, 1.2 g trimethylolpropane was mixed with 0.7 mL 25% KOMe in MeOH at 100.degree., the MeOH was distilled, and the product was taken up in 15 mL diglyme. A soln. of 34 g glycidol in 100 mL THF was added to the diglyme soln. at 140.degree. at the rate of 5 mL/h with continuous distn. of THF to give a viscous liq. product, after neutralization with Amberlite IR 120, having mol. wt. 3700 and polydispersity 1.15, in which 26% of the monomer units were branched.

2000:81502 Document No. 132:223272 Evaluation of the network parameter in aliphatic poly(urethane dimethacrylate)s by dynamic thermal analysis. Barszczewska-Rybarek, I.; Gibas, M.; Kurcok, M. (Department of Physical Chemistry and Technology of Polymers, Silesian Technical University,

Searched by: Mary Hale 308-4258 CM-1 12D16

Gliwice, 44-100, Pol.). Polymer, 41(9), 3129-3135 (English) 2000. CODEN: POLMAG. ISSN: 0032-3861. Publisher: Elsevier Science Ltd..

AB The decarbamates obtained from monomethacrylates of oligoethylene glycols and aliph. diisocyanates were polymd. free radically to form crosslinked polymers consisting of primary chains, crosslinks and pendant side chains bearing unreacted methacrylate groups. The polymers were examd. by dynamic mech. thermal anal. (DMTA) to yield values of glass transition temp. and storage modulus. The latter enabled the network parameters for individual polymers to be evaluated. These have been found to be low when compared with mol. wts. of the monomers and can be attributed to intermol. interactions between the pendant chains and the crosslinks involving urethane linkages. This finding is supported by the ¹H NMR expts. on monomers in soln.

1997:127114 Document No. 126:118183 Polymerization of Unprotected Synthetic Peptides: A View toward Synthetic Peptide Vaccines. O'Brien-Simpson, Neil M.; Ede, Nicholas J.; Brown, Lorena E.; Swan, John; Jackson, David C. (Cooperative Research Centre for Vaccine Technology, University of Melbourne, Parkville, 3052, Australia). J. Am. Chem. Soc., 119(6), 1183-1188 (English) 1997. CODEN: JACSAT. ISSN: 0002-7863. Publisher: American Chemical Society.

AB A generic method is reported for the assembly of multi-peptide polymers in which peptides are synthesized in the solid phase, the N-terminal residue

acryloylated, and the derivatized peptides cleaved, purified and finally polymd. by free radical induced polymn. The high mol. wt. polymers generated in this way have individual peptides pendant from a backbone support. Incorporation of 6-aminohexanoyl or other residue(s) at the N-terminus of the peptide prior to acryloylation allows the peptide to be distanced from the polymer backbone and incorporation of acryloylated reagents into the polymn. mixt. also permits distancing of pendant peptides along the length of the backbone support. The polymn. process results in highly antigenic artificial proteins as measured by ELISA. Because this approach allows the incorporation of the same or combinations of different purified peptides into polymers, it lends itself to the assembly of potential vaccine candidates contg. epitopes from single or multiple pathogens into a single covalent structure.

L28 ANSWER 7 OF 14 CAPLUS COPYRIGHT 2001 ACS

1997:19991 Document No. 126:135536 Biological activity of luteinizing hormone releasing hormone after oral dosing with a novel nanoparticulate delivery system: copolymerized peptide particles. Hillery, Anya M.; Toth, Istvan; Florence, Alexander T. (Centre for Drug Delivery Research, School of Pharmacy, University of London, London, WCIN IAX, UK). Pharm. Sci., 2(6), 281-283 (English) 1996. CODEN: PHSCFB. ISSN: 1356-6881. Publisher: Royal Pharmaceutical Society of Great Britain.

AB The ability of a novel copolymeric nanoparticulate delivery system, co-polymerized peptide particles (CPP), to deliver a biol. active peptide via the oral route was investigated using the decapeptide LH releasing hormone (LHRH) as a model drug. Intact male Wistar rats (270 g, 9 wk old) were orally dosed via gavage for 14 days with either the CPP delivery system (contg. 1 mg LHRH/day), free LHRH in a buffer vehicle (1 mg LHRH/day) or saline. The seminal vesicle and prostate **wts.** of rats dosed with the CPP system were approx. 50% of the **wt.** of the same organs from rats dosed with saline or free LHRH. Repeated daily oral dosing with the CPP system also resulted in a statistically significant fall in serum testosterone concns., to approx. 55% of the control level. The results demonstrate that biol. active LHRH was absorbed after oral dosing with the CPP system, whereas the free peptide had no detectable biol. activity. The chem. conjugation of LHRH within this copolymeric nanoparticulate delivery system represents a viable approach to promoting oral absorption.

1992:537523 Document No. 117:137523 Dose decrease of D-Phe6-GnRH for regulation of ovulation by formation of complexes with polyglycine. Naumann, W.; Braun, Karin; Losse, G. (Inst. Lebensmittelchem. Tech. Biochem., Tech. Univ. Dresden, Dresden, O-8027, Germany). Pharmazie, 46(11), 795-7 (German) 1991. CODEN: PHARAT. ISSN: 0031-7144.

AB The gonadotropin-releasing hormone (GnRH) analog D-Phe6-GnRH was complexed with polyglycine (mol. wt. 3000) by stirring together the 2 substances dissolved in HCO₂H, followed by evapn. of the acid and drying the complex over KOH. The complex was more resistant than the free hormone to tryptic hydrolysis in vitro. In the ovulation test in mice in vivo, the complex acted as a slow-release prepn.; its ED₅₀ was 34-fold less than that of the unprotected hormone.

1992:113314 Document No. 116:113314 Preparation of novel cationic lactam
polymers and 1-(3-alkylaminopropyl)-2-pyrrolidone intermediates as hair
conditioners. O'Lenick, Anthony J., Jr. (LCE Partnership, USA). U.S. US
5049680 A 19910917, 10 pp. (English). CODEN: USXXAM. APPLICATION: US
1990-518491 19900503.

GI

AB Title polymeric quaternary compds. I [R = Me(CH₂)_b, Me(CH₂)_c(CH:CH)(CH₂)_d, Me(CH₂)_eCHMe(CH₂)_f, Me(CH₂)_bOR₁(CH₂)₃, Me(CH₂)_dCHMe(CH₂)_eOR₁(CH₂)₃, Me(CH₂)_nCH[(CH₂)_mMe]CH₂OR₁(CH₂)₃; a = 2-125; b, c, d, e = 5-20; m, n = 4-20; R₁ = (CH₂CH₂O)_x(CH₂CHMeO)_y(CH₂CH₂O)_z; x, y, z = 0-20; Q = anion] are prep'd. Also given are the prepn. of pyrrolidones (II). Me(CH₂)₁₁NH(CH₂)₃NH₂ and butyrolactone under 100 psig N were heated to 275.degree. for 8 h during which time the pressure rose to 480 psig to give II [R = Me(CH₂)₁₁] (III). III and H₂O followed by epichlorohydrin were reacted, such that the d.p. and mol. wt. were controlled by the pH; in this case addn. of NaOH kept the pH at 7-8 and the temp. was maintained at 85-95.degree. for 2-6 h. In a test to screen the wet comb properties of III-epichlorohydrin copolymer, the time needed to get 1 smooth free stroke without tangling was 11 s vs. 12-14 s for a typical std. quaternary compd. Both II and their copolymers were also tested as fabric softeners.

L28 ANSWER 10 OF 14 CAPLUS COPYRIGHT 2001 ACS

1990:100315 Document No. 112:100315 Acrylic pressure-sensitive adhesives.
Ando, Masahiko; Sunakawa, Makoto (Nitto Denko Corp., Japan). Jpn. Kokai
Tokkyo Koho JP 01193384 A2 19890803 Heisei, 5 pp. (Japanese). CODEN:
JKXXAF. APPLICATION: JP 1988-18654 19880129.

AB Heat-resistant title adhesives with well-balanced adhesion and cohesion
consist of branched polymers [contg. 50-100% CH₂:CR₁CO₂R₂ (R₁ = H, Me; R₂
= C₂-14 alkyl)] whose wt. av. mol. wt. in gel
permeation chromatog. by light scattering method (A) and polystyrene
conversion (B) show relation A/B .gtoreq.1.3. Thus, a macromonomer prepd.
from 2-ethylhexyl acrylate (I), Bu acrylate (II), thioglycollic acid, and
glycidyl methacrylate was treated with I, II, and acrylic acid to give a
graft copolymer (III) (A/B 1.36), which was used to make an adhesive tape
showing peeling strength 1280 g/20 mm and good heat resistance, vs. 860
and poor, resp., using II-Et acrylate copolymer (A/B 1.03) instead of III.

1972:547861 Document No. 77:147861 Long-lasting corticotropic action of [1-gly]-ACTH-(1-18)-octadecapeptide amide-poly-L-aspartic acid complex. Hirata, Masaharu; Tanaka, Akira (Shionogi Res. Lab., Shionogi and Co., Ltd., Osaka, Japan). Chem. Pharm. Bull., 20(8), 1844-5 (English) 1972. CODEN: CPBTAL.

AB Complex formation of gly1-.alpha.1-18-ACTH amide [(1-glycine)-ACTH-(1-18) octadecapeptide amide] [24870-04-0] with poly-L-aspartic acid [25608-40-6] (mol. wt. 2300) in a ratio of 2:1, resp., prolonged the half-life of the amide in mice. Poly-L-aspartate-gly1-.alpha.1-18-ACTH amide complex [36955-68-7] exerted a long-acting corticotropic activity (6 hr) upon i.m. injection into hypophysectomized rats, whereas the effect of an equiv. amt. of gly1-.alpha.1-18-ACTH amide was no longer detectable 2 hr after injection, although the max. corticoid level was approx. the same. This depot-effect was not obsd. in animals pretreated with poly-L-aspartic acid 10 or 60 min before the amide. A prolonged corticotrophic action was also obtained by forming complexes of the
